

Chelated Manganese

Has yellow flash swept through your glyphosate-resistant soybeans?

Use Conklin Feast Chelated 6% Manganese to keep your soybeans a healthy, lush green, and not a nutrient-deficient yellow! Applying EDTA chelated manganese in combination with glyphosate products has been proven to help overcome induced manganese deficiency brought on by application of glyphosate. Feast Manganese is 100% chelated using an EDTA chelating agent, and is the ideal source of manganese to co-apply with your weed control.

Advantages of AgroVantage Chelated Manganese include:

- Compatible with most pesticides, most other fertilizers and other secondary and micronutrients
- Concentrated formula effective at low application rates
- Five to ten times more efficient than inorganic sources
- Economical, effective and easy-to-use

Soil and plant tissue testing are the only reliable methods available to accurately determine nutrient status. Conklin recommends using the AgroVantage soil testing system for precise nutrient recommendations including all essential elements.

Chelated Manganese - 6%

- | | | | |
|-------|-----------------------------|-------|----------------------|
| #7559 | Single 2.5 gallon | #7562 | 250 gallon mini-bulk |
| #7518 | Two jugs (2.5 gallons each) | #7534 | Bulk |
| #7526 | 30 gallon | | |

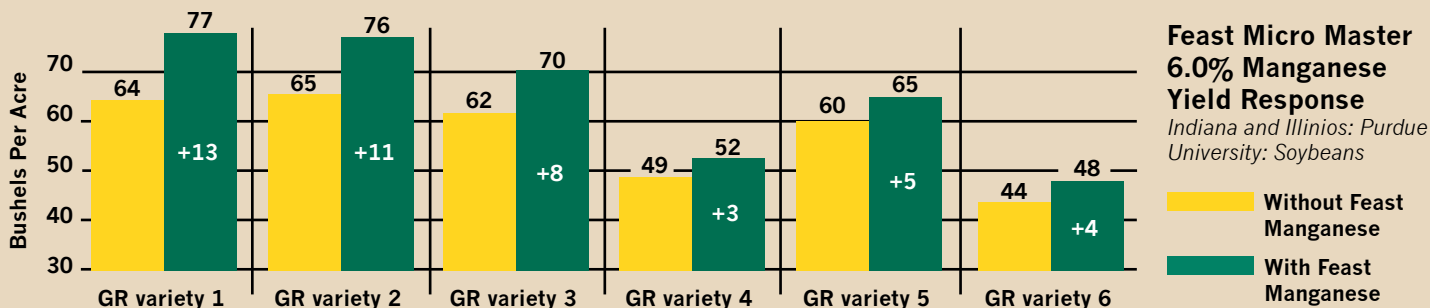

Yellow flash will ultimately impact yield.

“I treated a portion of my soybean field with Roundup® and the rest with Roundup® mixed with one pint/acre of Conklin’s Manganese. When I harvested the field diagonally I noticed the yield monitor jumped eight BPA where I’d applied the Manganese and dropped eight BPA where I hadn’t. When you’re talking \$12 beans, an 8-BPA increase is a \$96 return for just a few dollars.”

– Paul S., Missouri

In tests, applying Chelated Manganese to glyphosate-resistant soybeans cut back yellow flash and improved yield an average of **7.4 BPA**

Actual yield results have varied between .5 and 10-BPA increase on soybeans.
