

INSIDE THE SYSTEM

Donaldson:
Your source for leading air intake and exhaust systems

 **Donaldson®**

INNOVATIVE SOLUTIONS

Since 1915, Donaldson has been a driving force in innovative filtration solutions for the commercial vehicle industry. Today, Donaldson shares in the challenges of the transportation industry worldwide through strong and loyal partnerships with original equipment manufacturers.

Keeping pace with rapid changes in vehicle performance specifications for reduced noise and exhaust emission levels while at the same time increasing payload capacities and operating efficiencies is no longer an option – it's a requirement. To survive in today's highly competitive marketplace, vehicle manufacturers must respond quickly to changing requirements and look to suppliers for increased design expertise, flexible manufacturing capabilities and strong logistical support.

At Donaldson, we strive to be an exceptional resource through effective use of our unique filtration technologies, advanced computer design tools, and our expertise in fluid flow, acoustical analysis, and structural mechanics. As a worldwide supplier of air intake and exhaust systems, we are able to assist vehicle manufacturers in doing more today than was possible even a year ago.

Donaldson is a world leader in liquid filtration products including fuel, lube oil, and coolant filters for diesel and gasoline-powered engines. In addition, Donaldson manufactures an extensive line of filtration products for hydraulic applications. Two highly-automated manufacturing facilities, one in the United States and one in Mexico, ensure quality products at competitive prices.

Donaldson Air Link™ intake systems technology provides a fully-integrated air intake system. Our system designs begin at the ambient air inlet, efficiently cleaning the air on its way to the engine. Air Link™ systems include molded plastic technology, advanced media design, and fewer connections resulting in simpler designs, fewer parts, reduced weight and lower restriction.

ExSys™ integrated exhaust system technology can achieve similar results between the turbo charger and the tailpipe, including improved

acoustical performance. Donaldson exhaust system designs offer increased value and can keep your engine from working harder.

For maximum performance throughout the life of the vehicle, Donaldson offers a complete line of engine service products and can assist you in minimizing down time and maintenance expense.

At Donaldson, we continuously look for new ways to balance costs with effective design and superior performance.
